

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1. (Currently Amended) A system for providing thermal energy to a thermodynamic machine (3) for generating electrical power, comprising,
- a heat storage device (4) for storing thermal energy and a first heat transfer means (2) for transferring thermal energy from the heat storage device (4) to the thermodynamic machine (3) for generating electricity,

- first heat generating means (4) for heating the heat storage device (4) with electrical power,

~~characterized in that~~ wherein the system comprises second heat generating means (5) for providing thermal energy to the thermodynamic machine (3).

2. (Currently Amended) The system according to claim 1, ~~characterised in that~~ wherein it comprises an intermittent renewable energy source such as wind power, or low-cost baseload electricity from a power grid, as a source of electrical power for the first heat generating means (4).

3. (Currently Amended) The system according to claim 1, ~~characterized in that~~ wherein the second heat generating means comprise a second working fluid circuit with a second working fluid connectable to the thermodynamic machine (3), and a controllable heat source (51) for heating the second working fluid.

4. (Currently Amended) The system according to claim 3, wherein the first heat transfer means (2) comprise a first working fluid circuit (21) with a first working fluid connectable to the thermodynamic machine (3), ~~characterized in that~~ wherein the second working fluid circuit and the first working fluid circuit (21) are identical.

5. (Currently Amended) The system according to claim 1, ~~characterized in that~~ wherein the first heat generating means (4) comprise an ohmic resistor (43) inside the heat storage unit (1) or a heat pump.

6. (Currently Amended) The system according to claim 1, ~~characterized in that~~ wherein the heat storage device (1) comprises a heat storage medium (11) which is in a solid state at a lower temperature level of the storage device.

7. (Currently Amended) The system according to claim 6, ~~characterized in that~~ wherein the heat storage medium (11) is in a solid state at the higher temperature level of the heat storage device.

8. (Currently Amended) The system according to claim 1, ~~characterized in that~~ wherein the first heat transfer means (2) comprises a controllable heat resistance (25) for controlling the heat transfer.

9. (Currently Amended) A method for generating electrical power in response to an electrical power demand, comprising,

- heating a heat storage device (1) via first heat generating means (4) by

converting electrical power from an electrical power supply exceeding an electrical power demand,

- transferring, via a first heat transfer means (2), thermal energy from the heat storage device (4) to a thermodynamic machine (3) for generating electricity, and, if necessary, providing thermal energy to the thermodynamic machine (3) via second heat generating means (5) to meet an electrical power demand exceeding the electrical power supply.

10. (Currently Amended) The method according to claim 9, ~~characterized in that~~ wherein the electrical power demand and/or supply do take into account economical considerations.
